At the end of the product's life, do not dispose of any electronic sensor, component or instrument in the domestic waste, but contact the instrument manufacturer, Alphasense or its distributor for disposal instructions.

NOTE: all sensors are tested at ambient environmental conditions, with 47 ohm load resistor, unless otherwise stated. As applications of use are outside our control, the information provided is given without legal responsibility. Customers should test under their own conditions, to ensure that the sensors are suitable for their own requirements.

NO2-B4 Performance Data

Technical Specification

Figure 2 Sensitivity Temperature Dependence

Figure 2 shows the temperature dependence of sensitivity at 2ppm NO₂. This data is taken from a typical batch of sensors.

Figure 3 Zero Temperature Dependence

Figure 3 shows the variation in zero output of the working electrode caused by changes in temperature, expressed as nA.

This data is taken from a typical batch of sensors.

Contact Alphasense for further information on zero current correction.

Figure 4 Response to 20 ppb NO₂ using ISB circuit

Figure 4 shows response to 20ppb NO₂.

Use of Alphasense ISB circuit reduces noise to 12ppb, with the opportunity of digital smoothing to reduce noise even further

Figure 5 Response to 200 ppb NO₂

With a 33 Ω load resistor, the NO₂-B4 shows excellent resolution, even at the ppb level: ideal for outdoor air environmental testing.

This raw data can be digitally smoothed.
